

Educational tours/visits

Cost R50 per child, R30 per accompanying adult (NOT TEACHERS)

Minimum number 10 (per session)

Maximum number 20 (per session)

Duration of tour 2 hours (session)

Sessions (choose a theme for your visit)

<p style="text-align: center;">Seed Savers Workshop</p> <p>In this workshop, participants will learn the basics of what makes a plant a plant, the different kinds of plants, and what they all share in common? We will also look into the different ways that different kinds of plants reproduce. Through hands-on activities, they will learn how to properly save and plant seeds so that they will be empowered to take charge of their diets and begin growing their own plants.</p>	<p style="text-align: center;">Ready To Recycle Workshop</p> <p>Our planet is filling up with rubbish! Plastics have helped so much with safety and storage, but now they are filling our landfills and our oceans at an alarming rate. We will look into how to sort rubbish into reusable, recyclable, biodegradable and true rubbish (and make some eco-bricks in the process!). We will also look into what practices of our own contribute to unnecessary waste and what we can do reduce our waste output and encourage others to do the same.</p>
<p style="text-align: center;">Water Warriors Workshop</p> <p>Western Cape is in the middle of a serious drought! We will look at the different causes of the drought, how different plants and animals (including humans!) are affected by drought. We will also brainstorm different way in which we can each work to reduce the amount of water we use (or waste) every day. Participants will work to make their own water bottle irrigation system for saving water in home gardens.</p>	<p style="text-align: center;">Bodacious Bugs Workshop</p> <p>Arthropods or “bugs” are all around us! We see them every day. They crawl in the ground, they fly in the air, they help us, they hurt us; we could not live without them. In this workshop, we will learn to understand “bugs” a bit more. We will look at the different way that they help in a garden and we will come up with different ways that we can encourage them to come into our home gardens, including making our own Bug Hotels!</p>
<p style="text-align: center;">Surfing the Food Web Workshop</p> <p>From the prettiest flower to the smallest insect to the largest mammal, every living thing in an ecosystem is linked together in a food web. If any one of those living things vanishes from the food web, the rest of the web is affected. We will look at the food web found in a typical South African garden and think about the different connections that we see. We will even play a food web game to help understand it better!</p>	<p style="text-align: center;">Water Wildlife Workshop</p> <p>From the mightiest river to the smallest mud puddle, water provides the perfect ecosystem for hundreds of different plants and animals! We will look at the ponds, pools around the garden, and investigate which organisms have made their home in them. We will look at how the organisms interact with one another and how human activity can disrupt their ecosystem.</p>
<p style="text-align: center;">Know Your Plants Workshop</p> <p>We owe everything to plants! They provide oxygen for us, they provide food for us, and they provide protection for us. The Western Cape is home to many unique varieties of plants. We will look closely at the different kinds of plants around us and we will look at their leaves, flowers, and bark to help us identify them. We will even make some leaf rubbings as a souvenir!</p>	<p style="text-align: center;">Health Nuts Workshop</p> <p>Every day we are bombarded with adverts for salty, sweet, and fatty snacks and drinks. However, is this what we should be putting into our bodies? In this workshop, we will look at what foods we need to eat in order to be our best selves. We will ponder what foods we should enjoy every day and what foods we should only enjoy as a rare treat. The garden is a perfect place to find a variety of different foods to make a healthy and delicious “rainbow plate”.</p>

The Five Senses Workshop

Most humans have five senses to help them navigate the planet. With so many herbs, flowers, leaves, and animals in the garden, it is the perfect place to explore those senses. We will also look at how different people live without one or more of those senses.

Wonderful Weeds Workshop

Weeds have a bad reputation. Nobody seems to want them around! In this workshop, we will look at what a weed really is and whether or not they really are “bad”. We will look at what skills weeds have developed to become so good at what they do. We will even see if some of these so-called weeds are good to eat.

Clay Creators Workshop

One needn't go to an expensive art supply shop to find clay. It comes from right here in the earth! In this workshop, we will find and mix our own clay and craft it into various vessels. We can also get creative with it and make some fine art. Get ready to roll up your sleeves and get dirty!

ALL SESSIONS SUITABLE FOR: Preschool, Primary, High School

TAILOR MADE SESSION ON REQUEST.

For booking call 021 794 4982 or email info@soilforlife.co.za
